Trans. of la Ricerca Scientifica (Italy) 1959, v. 29,
no. 1, p. 100-105.

DESCRIPTORS: *Germanium, Solutions, *Organic
acids, Polarographic analysis, Reduction.

An investigation was made of the polarographic re-
duction of tetravalent germanium in solution of com-
plexant organic acids, i.e.: gallic, oxalic and
tartaric acids. Values are given of coefficients and
constants of the diffusion current obtained by operating
in the various media and gives the optimum pH range
in which the mercury cathode reduction assumes an
analytical significance.

DESCRIPTORS: *Glass, Coatings, *Palladium,
Hydrogen, Gases, Permeability, Quartz, *Metal
films, *Diffusion.

The permeation of hydrogen through quartz glass
coated by a film of palladium is in the temperature
range from 400 to 700° C, 1.44 times greater than
that through pure quartz glass. Above 700° C, this
diffusion is based on the crystallization of Pd.
